Securing Customer Access Without Compromise

Users expect not only a great experience, but trusted protection that only the best security can provide.

50% More

- cost of a breach for financial services firms compared to any other industry.

- IBM

Securing Customer Privacy

- ✓ Financial Services are targeted more than any other sector, with breaches tripling over the past 5 years (*Accenture*).

- ✓ Cybercrime in financial services increased by over 40% over the past 3 years, costing on average over $18m per firm in 2017 (*Accenture*).

- ✓ Security is a top priority for users of financial services. 44% of users believe they are most secure using their fingerprints followed closely by iris scans (30%) (*IBM*).

Building Trusted Relationships

- ✓ One security misstep can cost you countless customers and breach the trust they have in your company.

- ✓ Research has shown that organisations that have initiatives that aim to improve customers' trust in how the organisation safeguards their personal information, will reduce churn and the cost of a potential breach.

- ✓ Demonstrate your commitment to customer privacy by taking basic steps for cyber security with SecurAccess.

Equifax Breach

As one of the largest credit bureaus in the US, Equifax had an application vulnerability on one of their websites which led to a data breach that exposed about 147.9 million consumers. The breach may have lasted 2.5 months before discovery.

JP Morgan Chase

The largest bank in the US was the victim of a hack during the Summer of 2014 that compromised the data of more than half of all US households – 76 million – plus 7 million small businesses netting the hackers over 100 million dollars in proceeds.

Customising Your Security

✔ Whether you have one or a million accounts, our solutions scale with ease.

✔ Security without adoption is meaningless. We offer many authentication methods that can fit the level of security and ease of use your business requires.

✔ We offer custom branded portals and mobile interfaces to create seamless, branded environments.

Seamless Implementation

✔ Security is an expectation, not a compromise. Whether you prefer on-premise, the cloud or a hybrid solution, we have options to fit any need.

✔ Security implementation should not be painful. We pride ourselves in fast, efficient and secure implementations start to finish.

✔ Don't take our word for it. Talk to our customers. Our customer advisors push us to new heights on the leading edge of the security industry.

Over 90%

of login requests on many of the world's largest web and mobile applications come from cyber attacks.
