

SecurEnvoy Data Discovery for Atlassian Suite

SecurEnvoy Data Discovery offers simple, quick and effective data discovery and reporting across Atlassian Confluence, Jira and Bitbucket.

Seamless integration with Atlassian solutions ensures a robust security framework that is tailored to scan, monitor and manage data access and permissions effectively.

Unparalleled data discovery for Atlassian Confluence, Jira and Bitbucket

With SecurEnvoy Data Discovery you can monitor data across your Atlassian environment, regardless of whether it is on-premise or you are using the Atlassian SaaS solution.

Built-in algorithms accurately identify unstructured sensitive data, including Personally Identifiable Information (PII), Payment Card Information (PCI), Intellectual Property, HIPAA and GDPR-related information. SecurEnvoy Data Discovery also gives you the flexibility to include your own custom search terms.

Do you know what sensitive data is stored in your Atlassian products?

Comprehensive sensitive data discovery, monitoring & remediation

SecurEnvoy Data Discovery for Atlassian is a comprehensive solution, that helps lighten the load of monitoring and managing sensitive data and remediating issues.

Data Discovery and Monitoring

- **Confluence:** Confluence tracks new and edited content. Configurable up to and including all spaces, all pages, all blogs, all attachments, all comments, and all versions
- **Jira:** Monitors new issues and edits. Configurable up to and including all projects, all workflows, all Issues, all attachments, all comments, all history
- **Bitbucket:** Oversees new commits with alerts, respecting the immutable nature of commits. Configurable up to and including all repositories, all branches, all comments, all history

Data Protection

- Restrict content and security levels

Data Extraction

- User-friendly dashboard and executive reporting

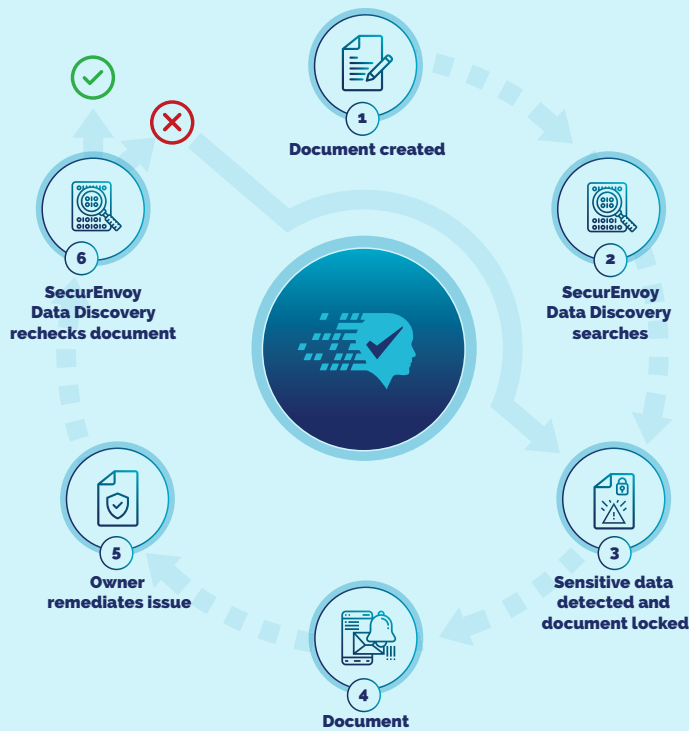

Data Remediation

- Data owners are notified of sensitive data issues in real time and are responsible for remediation. Files are locked until actions taken.

Data Migration

- Locate your data easily, ready for migrating to the cloud.

Take control of data remediation across the Atlassian Suite

Data owners are notified of sensitive data in real-time, ready for immediate action to be taken.

- ✓ **Real Time Alerts & Audit Trails:** Instant notifications and detailed audits are provided to data owners for immediate awareness and action.
- ✓ **Automated User Remediation:** Prompt alerting mechanisms are coupled with streamlined remediation processes.
- ✓ **Streamlined Permission Management:** Integrated access control allows for efficient revoking and reinstatement of permissions before and after remediation, ensuring seamless workflow continuity.
- ✓ **Deferred Actions:** Set a timeline for permissions remediation, giving users an opportunity to address issues before access restrictions are enforced.
- ✓ **Adjustable scan intensity:** Customisable settings are available so you can manage the scan load to prevent overwhelming data resources and ensure normal operations remain undisturbed.

Real time data scanning you can fine-tune

With real time alerts, selective scanning and intensity, administrators are able to take full control of sensitive data scanning.

- ✓ **Immediate data monitoring:** Real time scanning ensures immediate detection and alerts for sensitive data additions.
- ✓ **Selective scanning:** Administrators can target specific Spaces, Projects, Repositories, and Branches, with granular controls over the scan depth and historical data coverage.
- ✓ **Targeted scan depth:** Scans can be focused on specific areas or dates to meet administrative needs.
- ✓ **Flexible scan management:** Pause or resume scans to fit around planned and unplanned Atlassian maintenance activities.

Full integration for database security, workflows and alerting

- ✓ **Vault Integration:** Integration with Hashicorp Vault enables secure credential management for enhanced database security during scans.
- ✓ **Streamlined Workflow Integration:** Feeds into other data streams (like syslog) and provides a centralised dashboard for ongoing visibility and control over audit processes.
